

Katana Agent — Paytm RRN Capture

User & setup guide for the Android forwarder agent (package `shop.glhouse.agent`) · v2.17

1. What it does

Every payment into your Paytm Business account is captured on your Katana dashboard the moment it lands — payer, amount, and Order ID. The one thing Paytm never puts in a notification, SMS, or email is the **RRN** (the 12-digit UPI reference). It exists only on the Paytm app's transaction-detail screen, shown *masked* (e.g. `618...387144`), with a **Copy** button next to it.

With the Katana Agent installed, you fill in any payment's RRN with **one tap**: open the payment in Paytm Business and tap that **Copy** button — the agent reads the full RRN and sends it to your dashboard, where it lands on the correct payment row automatically.

2. How it works

Payment arrives → the row appears on your Katana dashboard within about a minute, marked “**no RRN**” → whenever convenient, you open that payment in **Paytm Business** and tap the RRN's “**Copy**” button with your finger → the agent reads the copied RRN and sends it to `glhouse.shop` → the dashboard row now shows the full RRN.

One tap per payment — that's the whole job. The payment itself (amount, payer, time) reaches the dashboard on its own; only the RRN needs your tap. Paytm only reveals the RRN on a real finger tap, so this step cannot be automated on a self-installed phone. There is **no rush**: a tap works up to **14 days** after the payment, so you can batch them at the end of the day.

3. What you need

- The Android phone with the **Paytm for Business** app, logged into the merchant account.
- The Katana Agent APK: **download from** `https://glhouse.shop/katana-agent.apk`
- Your **merchant code** (e.g. `MTCI-01`).

4. Install

1. On the phone, open `https://glhouse.shop/katana-agent.apk` in the browser and download it.
2. Open the downloaded file → allow “Install unknown apps” if prompted → **Install**.
3. Updates install over the top (same signing key) — no need to uninstall first.

5. First-time setup (~5 minutes, one time)

Open the **Katana Agent** app:

1. Scroll to **Connection** → enter your **merchant code** → tap **Save settings**. The status must show **✓ verified**.
2. Back at the top, grant all five permissions — each row has its own button and turns into a green tick when done:

Permission row	Where it takes you	Why
Bank SMS	one popup → Allow	Reads incoming bank credit SMS
Notification access	Settings → toggle Katana Agent on	Detects each incoming payment alert
Background activity	Battery → Unrestricted	Stops the phone from killing it
Screen reader	Accessibility → toggle Katana Agent on	Reads the receipt screen when you tap Copy
Display over other apps	toggle on	Lets it read the RRN off the clipboard

Oppo / OnePlus / Realme (ColorOS) note: on Android 13+, first open App info → ⋮ (top-right) → **Allow restricted settings**, or the Accessibility toggle will not stay on.

When everything is granted the header reads “**Agent active**”. Setup is complete.

6. Verify it's working

1. Take one test payment into the Paytm Business account (any small amount).
2. Within a minute, the payment appears on your Katana dashboard marked “no RRN”.
3. Open that payment in Paytm Business → tap the RRN's **Copy** button.
4. Within seconds the dashboard row shows the full 12-digit RRN. The agent's live log shows the trail: **tap 'Copy' on the RRN → clipboard RRN... → ✓ sent**.

7. Everyday use

- Leave the agent installed and the permissions granted — payments flow to the dashboard by themselves.
- To fill in RRNs: open **Paytm Business** → payments list → tap a payment → tap **Copy** next to RRN. Repeat for the next payment.
- Rows still missing an RRN stay visible as “no RRN” on the dashboard — that's your to-do list.
- Batching is fine: taps work up to **14 days** after a payment.

8. Troubleshooting

RRNs stopped being captured after a Paytm or agent update

Phone-brand skins (especially ColorOS) can silently switch the **Screen reader (Accessibility)** off after an app update. Open the Katana Agent app — any permission that lost its green tick shows its button again; re-grant it.

Payment shows on the dashboard but stays “no RRN” after tapping Copy

- Confirm the agent shows “**Agent active**” and all five permissions have green ticks.
- Make sure you tapped Copy next to **RRN** (not Order ID / Transaction ID). The agent validates the copied value against the masked number on screen, so a wrong Copy is ignored, never sent incorrectly.
- Check the phone has internet; queued captures retry automatically (“Queued ... pending retry” on the main screen).

Everything stopped working

Do **not** force-stop (“swipe-kill”) the Katana Agent from recents settings — on some phones this switches the screen reader off entirely until re-enabled. Open the app and re-grant anything missing its green tick.

9. Good to know (limits)

- The payment itself (amount / payer) is always on the dashboard within about a minute — only the RRN waits for your tap.
- One tap fills one payment's RRN. There is no bulk button — Paytm reveals each RRN only on a real tap on that receipt.
- A fully hands-free mode exists only on **operator-prepared devices** (Shizuku pre-configured). It is not part of self-install; if you need it, ask the Katana operator for a prepared device.
